Angela,

Many Thanks, as you probably can surmise we need this for the “only mission critical” travel calibration for HQ.

Subject: San German and Cabo Rojo Vapor Intrusion Sampling
Good morning Harry,

With regard to vapor intrusion testing at the above referenced Superfund sites, the Region considers this work mission critical. Without this information there will not be any way to determine whether or not the people in these communities have a vapor intrusion problem in their homes or schools.

Please call me if you need any further information on these sites.

Thanks for all your continuing assistance with our projects, it is much appreciated.

Angela
